

There are two **spongy bags** filled with **air** that we called them **lungs**.

They help in the exchange of **gases** in the body.

The **lungs** get oxygen from the air and take out the carbon dioxide.

Liver is the largest organ of our body.

It does a lot of activities to keep our
body **healthy**.

It helps in the **digestion** of food.

digestion =
changing the food
that you eat to
the things that
your body can
use.
