what is the difference between misty and foggy?

foggy

misty

Fog and mist differ by how far you can see through them. Fog is when you can see less than 1,000 metres away, and if you can see further than 1,000 metres, we call it mist.

what is the difference between rain and showers?

Weather forecasts often refer to either rain or showers, but did you know they often give a very different 'feel' to the day? Showers imply the weather will change a lot during the day with rain on and off, whereas rain will bring continuous wet weather for hours at a time, and then it will clear.
