

Southern and Arctic Ocean

CONTENTS

01 / Location

02 / Important characteristics

03 / Important Animals

Southern Ocean

Location

The Southern Ocean surrounds Antarctica, extending from the Antarctic coastline to about 60 degrees south latitude.

1. Surround: If one thing surrounds another, it is situated all round it.
2. Extend = continue
3. Coastline: outline of a coast
4. Latitude = width

Important Characteristics

It's the smallest and coldest ocean, characterized by strong winds, icebergs, and extreme conditions.

extreme conditions = very bad situation

Important Animals

The Southern Ocean is rich in marine life, including various species of seals, penguins, whales (like the blue whale).

Arctic Ocean

Location

The Arctic Ocean is located around the North Pole, bordered by northern North America, Europe, and Asia.

bordered = surrounded

Important Characteristic

It's the smallest and shallowest ocean, covered by sea ice for much of the year. The Arctic is experiencing rapid climate change, resulting in shrinking ice cover.

Shallowest \neq deepest

Rapid = fast

Shrink = melt

Important Animals

The Arctic Ocean is home to polar bears, walruses, seals, and various species of whales and seabirds that are adapted to cold environments. It also supports unique ecosystems that exist around the sea ice.

Adapt = adjust
