

A photograph of the Si-o-se-pol bridge in Isfahan, Iran, at night. The bridge is a long, multi-arched structure made of brick and stone, illuminated from within, casting a warm orange glow. The bridge spans a body of water, and its arches are reflected in the calm surface below. The sky is dark, and the overall scene is serene and historic.

What's interesting about this bridge is that it only took 3 years to complete this structure.

Si-o-se-pol was built to connect the norther section of the city to the southern section. It was also used as a dam.

The picture of the bridge reflections in the river at night attracts lots of tourists to Iran.
