

Computers and the environment

People use computers every day. They use them for work, school and free-time activities. Computers are helpful, but we have to use them correctly and protect the environment.

- 1 We need to turn off computers when we aren't using them. This saves electricity and that's good for the environment. It also saves money!
- 2 We need to save paper, too. If we save paper, we will also save our forests. You shouldn't print things if they aren't necessary. Think before you print!
- 3 We need to recycle our old computers, tablets and phones. Don't put them in the rubbish bin. It's bad for our planet. Put them in the recycling bin.
- 4 We need to recycle old batteries too. They can pollute our rivers and lakes. We must put old batteries in a special recycling bin. Please, don't forget!
