

What do you think of when you hear the words artificial intelligence?

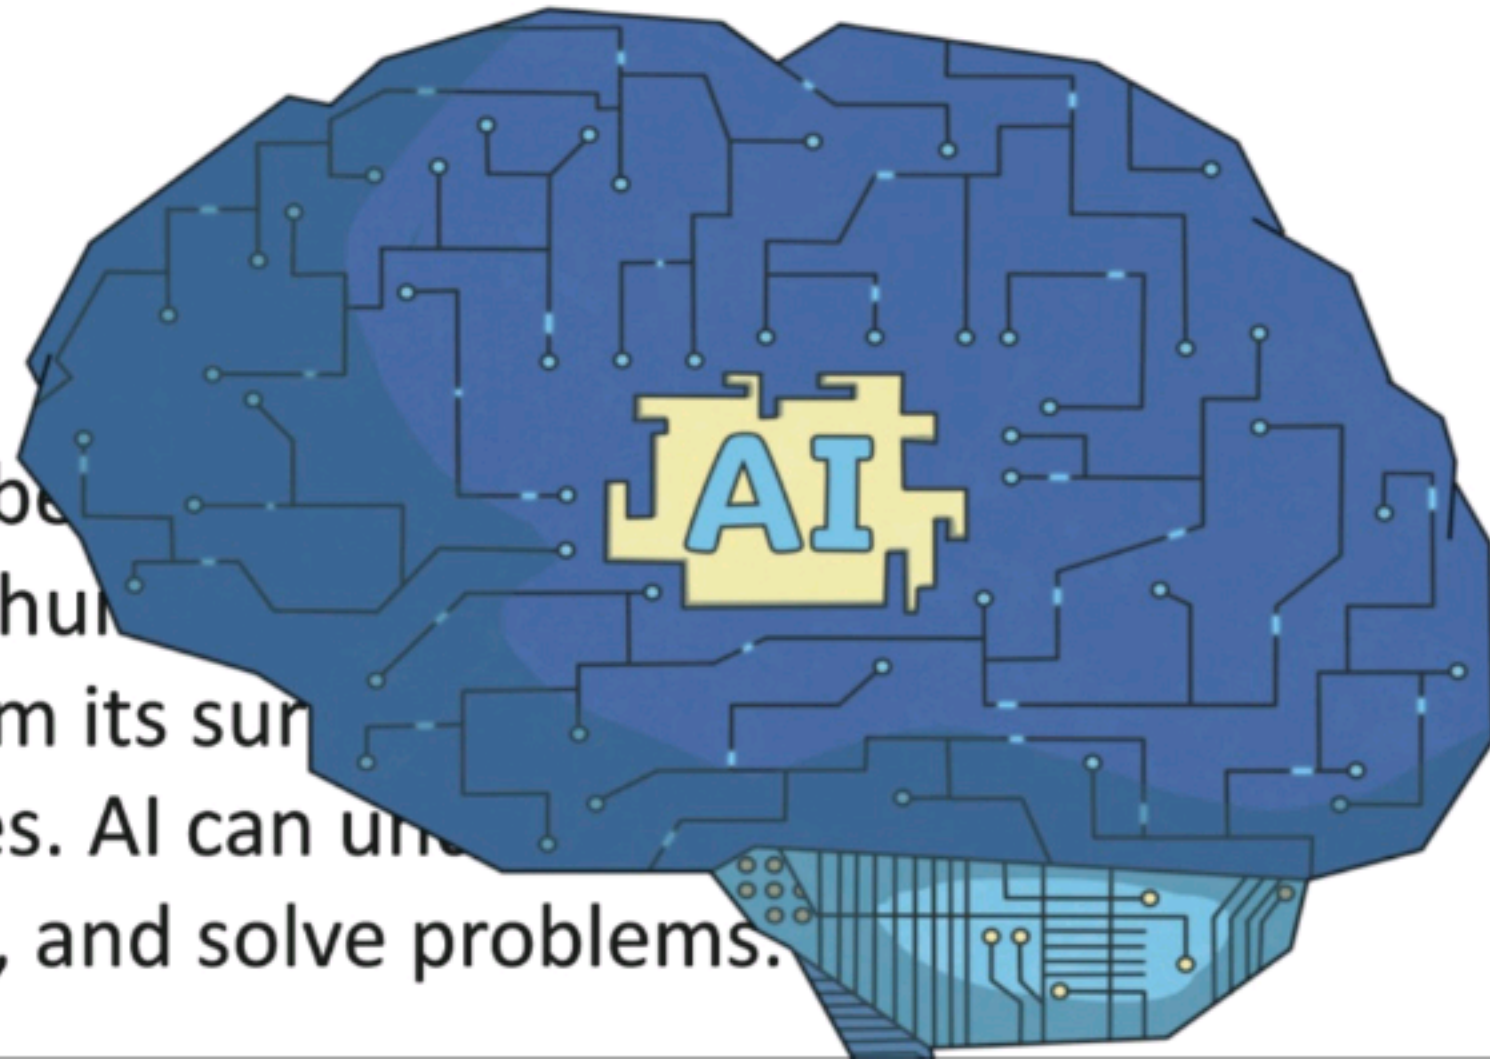

What is Artificial Intelligence?

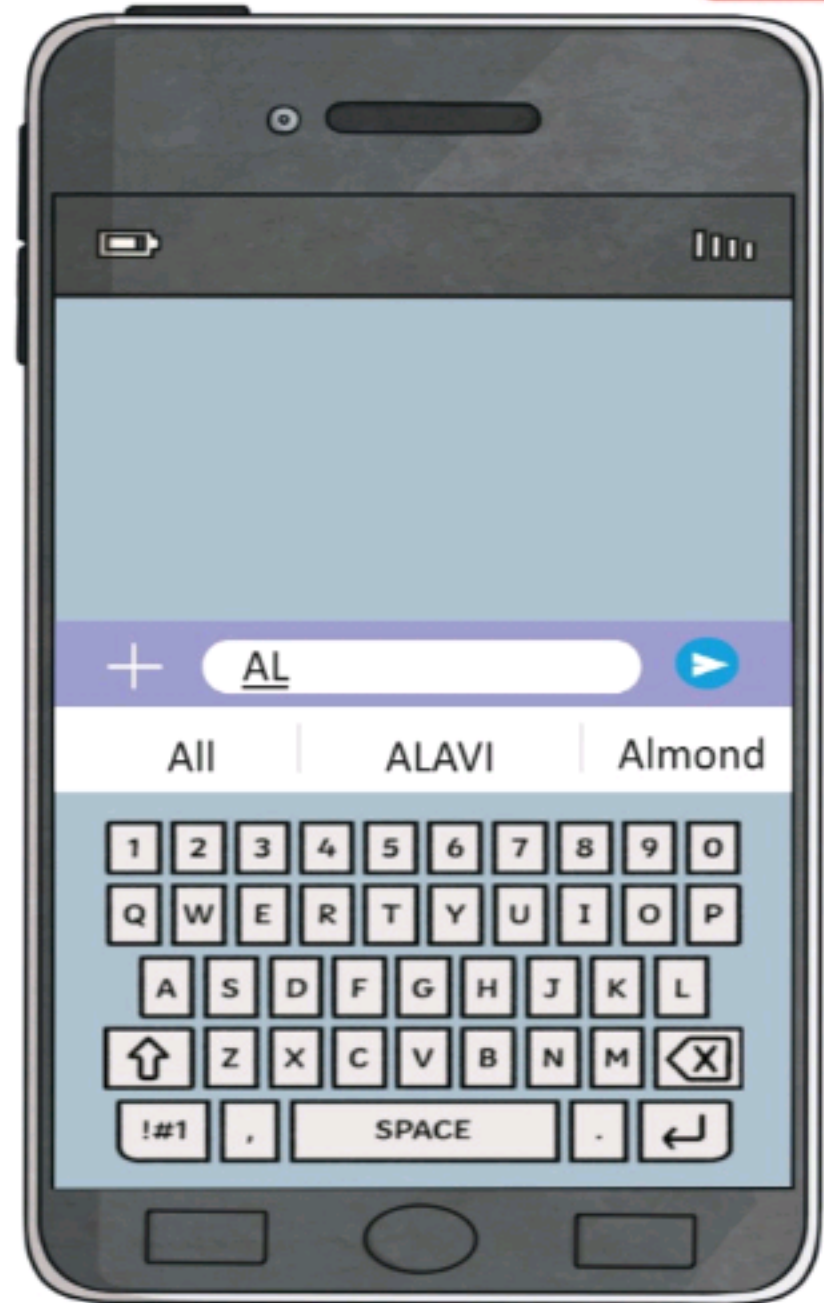

AI is smart technology that helps computers learn and act like humans.

A machine can be programmed to perform tasks similar to human tasks. It can process information from its surroundings and learn from past experiences. AI can understand language, learn, and solve problems.

Have you ever typed into a smartphone, laptop or tablet and seen it predict the next word or try to complete the sentence for you?

In what ways can AI help us?

- Antivirus Software
- Self-Driving Cars
- VR Gaming
- Robot Vacuum Cleaners
- Traffic Information
- Face Unlock
- Search Engines
- ...

Talk about what you know

Security

Security cameras and alarms are connected to phones and can be controlled with apps or voice commands.

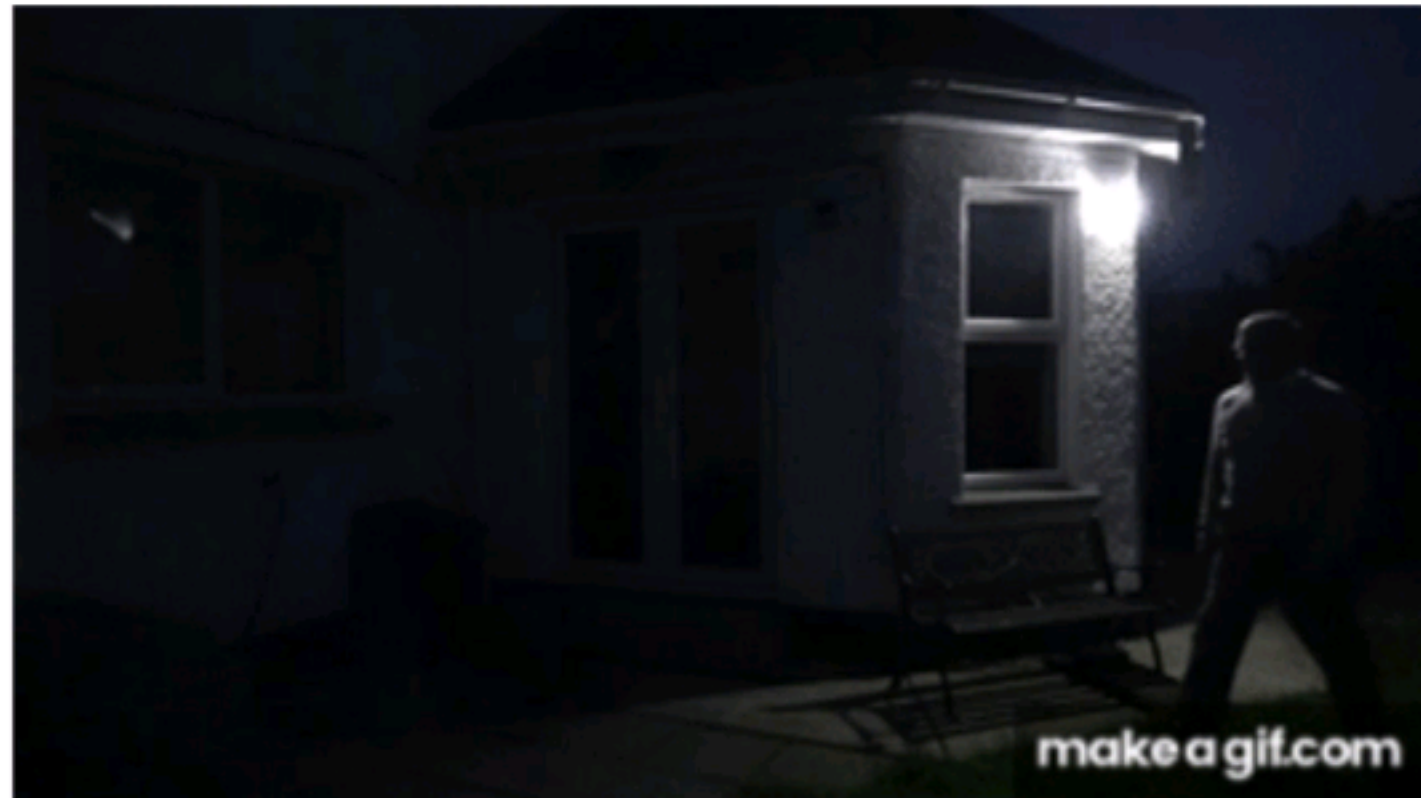

Thermostat

Smart thermostats change the temperature based on the weather or the time of day. They also learn your routine and change the temperature based on your habits.

Automatic lights that turn on when
someone enters the room...

...and turn off when no one is in the
room

Features of Smart Homes
