

Birds

Alavi

wings

All birds have two legs, two wings, and feathers, and most birds can fly. The wings and feathers help them fly, and the feathers help keep them warm. Birds lay eggs with hard shells. They keep the baby birds inside safe from animals that want to eat them.

Fish

Alavi

Fish have gills to help them breathe in water. Scales all over their bodies help keep them safe from dangerous fish that want to bite them. They don't have legs, but their fins and tails help them swim. Fish lay their eggs in water, and their eggs are soft.

scales

gills

Think How are fish different from birds?
