

These are the seven life processes.

Things that are alive:

-  need air to breathe.
-  need water and food.
-  can move.
-  have senses.
-  can produce young.
-  grow.
-  produce waste products (**excrete**).

A car **isn't** alive, because:

- It **doesn't** need water or food to live.
- It **doesn't** need air to breathe.
- It **doesn't** grow.
- ...

Now it's your turn!
